

AMI Imaging Systems, Inc. announces partnership with UK aviation records company Waviatech

Minneapolis September 1st 2006

AMI Imaging Systems, Inc. of Minneapolis recently engaged with UK based aviation records consultancy Waviatech on a project that involved the scanning of over 500,000 aircraft technical records for a client at Minneapolis St Paul airport.

“It has been a very successful venture and we hope to work on similar aviation related projects in the future” commented Lee Meyerdirk, Account Manager at AMI Imaging. “The combination of Waviatech’s aviation expertise and AMI’s established experience in scanning projects has delivered a world class product to this customer” continues Meyerdirk.

Waviatech had secured a contract to scan and index paper records for 12 aircraft into its aviation designed ‘Stream’ document management system. Waviatech sent a team of its experienced aviation records consultants to assess and barcode the records in advance of scanning. It then looked for a suitable local partner to sub-contract the physical scanning, provision of equipment and manpower and chose to work with AMI Imaging.

“We engage with document companies all over the world to enable us complete our aircraft scanning projects faster and without having to resource staff and equipment from our UK base” says Godfrey Ryan, Sales and Marketing Manager of Waviatech. “The folks at AMI have been a pleasure to deal with and we look forward to exploring new opportunities in the Minneapolis region in the near future, which of course is a hub for a number of large airlines”

About AMI Imaging Systems, Inc.

AMI has been serving customers and solving business problems since 1982. We are an industry leader specializing in Document Management Technology, Workflow and Process Automation, and Outsourced Conversion Services. We focus all of our resources on understanding and meeting your business needs.

AMI’s customer base includes both large and small customers. Conversion service projects range from a few thousand to millions of pages. AMI provides some customers with very small, stand-alone systems with only a few users and thousands of documents. Others have very large systems where thousands of people have access to systems containing hundreds of millions of pages.

About Waviatech

Waviatech specializes in aircraft and engine technical records, providing digital records solutions using the most advanced technology and systems available today. Stream has been developed by Waviatech to be the world's most intelligent solution to manage digital images of aircraft records where the original source is paper, microfilm or extracted from CD containing PDF.

To date, records for over 100 aircraft have been captured in Stream with 18 of these completed for aircraft whose records were solely contained in microfilm format. Waviatech also provide a number of services including global records capture/processing service, aircraft technical records audits and aircraft inspection services.
